

QuantaShield Valuation Analysis

Standalone value, strategic value and proposed risk allocation

Method	Low	High / point
2025 ARR multiple	\$64.9m	\$88.5m
2026E revenue multiple	\$82.5m	\$115.5m
DCF	n.a.	\$49.4m
Weighted standalone range	\$69.8m	\$92.2m
Five-year net synergy NPV	n.a.	\$15.1m

Neutral assessment

The startup's \$115m all-cash request is above the risk-adjusted standalone range and gives the seller most strategic value before execution. The buyer's \$90m potential value is defensible but places too much commercial risk on the seller. A \$100m headline value better matches the evidence if \$13m is tied to measurable commercial outcomes and \$5m is held for identified IP and compliance cures.
